

# Great tasting, freshly-filtered water from your existing mixer tap!

Our latest inline water purification systems enable you to get pure, freshly-filtered water without the need for a separate tap.

Simply install the filtration unit under your kitchen bench or in your bathroom/ensuite and plumb it directly into your existing tapware.\*

## Smart filtration technology makes your water safer and tastier.

Mountain Fresh inline purifiers use a one micron filtration system and granulated carbon filters to remove/reduce harmful pesticides, herbicides, chemicals and nasty bugs, including Giardia and Cryptosporidium. Granulated carbon filters are better suited to low pressure taps. If you are living in urban areas (town supply water) you may choose to further your filtration power with a Granulated Carbon and KDF filter combination to remove/reduce heavy metals from your water too.

Replacing the filters is simple and they can be quickly changed without the need for a plumber when the time comes.\*

Now you can enjoy great tasting, odourless water without needing to buy bottled water from the store!

The optional added KDF filter reduces heavy metals, controls bacteria growth and reduces lime scale.

- Safe, fresh-tasting and odourless water
- No need for new tapware
- Removes/reduces harmful chemicals like chlorine
- Add KDF filtration to remove heavy metals
- Simple and quick to install
- Easy-change filters

QCV inline filtration systems	QCV1	QCV1/ KDF
Filtration method	One micron Granulated Activated Carbon (GAC)	One micron GAC and KDF (Kinetic Degradation Fluxion)
Min. operating pressure	11psi	
Max. operating pressure	100psi	
Filter life	Approx. 12 months, depending on water quality	
Warranty	1 year	

\* We recommend the initial installation is completed by a plumber.

Order online at [www.mountainfresh.co.nz](http://www.mountainfresh.co.nz) or call 0800 787 342

# Other options:

## Underbench Purifiers

This is a concealed underbench system with its own separate tap which can be chosen from our range.

- Easy to install yourself.
- Fitted with a one micron carbon filter to remove harmful bacteria, chemicals, pesticides, herbicides and odour/bad tastes.

## UV Sterilisation Units

UV sterilisation removes 99.9% of the contaminants in your water and can either filter your whole house or just your drinking water.

UV sterilisation is the ultimate in water purification. The water is sterilised with UV irradiation, destroying bacteria and viruses such as E-coli, Giardia, Hepatitis, Legionella, Salmonella, Cryptosporidium, Streptococcus and more.

## Benchtop Purifiers

Perfect for people who rent or travel and want to be sure that the water they are drinking is clean.

Attaches to any tap. No extra parts needed.

- Attaches to your existing cold water tap.
- Fitted with a one micron carbon filter.

Can be converted to an underbench unit with the addition of your choice of tap.

## Drinking Fountains/Coolers

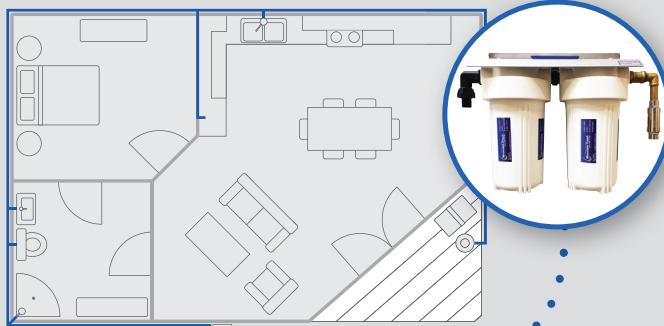

Mountain Fresh manufacture outdoor drinking fountains for schools, kindergartens and Council owned parks. We also supply water coolers perfect for your workplace. Phone or email us for more information!

## Replacement Filters

Mountain Fresh supply a wide range of water filters to suit your water purification needs. Various sizes, media and purposes are available. Phone us for advice.

## Whole-house water filtration

Get freshly-filtered water from every tap in your home. These systems are plumbed directly from the mains line. Cook, clean and bathe in contaminant-free water while protecting expensive appliances from scale and calcium build-up.

## Purifier Taps

We have a range of high quality and stylish taps available to purchase as part of a water purifier package, or to replace your existing tap with a stylish new model.

## Tri-taps

Tri-tap models enable you to have a single mixer tap with a choice between standard hot and cold water, or cold filtered water.
